project the expected values of the variables concerned for the coming 20 years. In part 5, using the projected data and the case studies of developed countries, we try to suggest a few policies which can fasten the economic progress in the country. This paper ends with the conclusion and a few remarks.

Abstract

The main aim of this work is to find the effects of rapid population growth on economic development in India. This is very important because India is second most populated country in the world and many studies show that India will overtake china soon based on the population growth rate in both of these countries. So the study of relationship between these variables may help the government to consider the effect of population growth on their policies in future.

This paper is mainly divided into five parts. In part 1, we try to make the reader familiarize with the existing works on this topic. Part 2 lists the variables which are relevant to show how population growth and economic development interact. In part 3, we will look upon how the developed countries have progressed and the interaction between these variables in those countries. In part 4, the relationship between these variables in the Indian context is looked upon and we also try to

Index Terms:

Population growth, Economic development, Economic progress, Developed and developing countries, Linear regression model.

Background:

Based on the history of all the developed countries, we can find that the human capital is a major component of growth. This can be basically said from the fact that resources required for economic growth are driven by the availability of human capital. Other positive affects of population growth are economies of scale, the possibility of increasing market for the goods produced in the country, and the new attitudes, ideologies, creativity they bring compared to the older population. But population growth may also have adverse affect on a nation's growth. This is because many resources has to be spent on the rising human population and it creates pressure on the limited natural resources a country has and diverts the
